## (54) LED DISPLAY DEVICE

### (57)Abstract:

PROBLEM TO BE SOLVED: To provide an LED display device capable of realizing the connecting relation of high reliability even in the case of constituting a large sized display system.

SOLUTION: This device is provided with a dot matrix type LED display unit 2, a display driving means 3 driving the lightings of the LEDs, a signal transmitting and receiving means 4 constituted of a first latch means 5 latching input control lines and input display data, a second latch means 6 latching respective output signals of the first latch means 5 with the opposite phase of an input clock and respectively outputting them as output control lines and output display data and an inverter 7 and a display control means 8 controlling the display driving means 3.
